+PROJECTS

Social Discovery Dating Website

(4-person project)

(Javascript, HTML, CSS)

-Utilized Ionic Frameworks, and Facebook API to build a mobile app/website

-Had organized weekly team meetings for code reviews, documentation, and functionality testing.

Technology Query Application

(1-person project)

(Java, Swift, PHP)

-Utilized Eclipse IDE and Apache Maven Integration.

-I was delegated the project to create a Mac application that will be installed in all of the Mac machines in the entirety of the Northern Arizona University campus.

-This application allows students to alert ITS of any conflicts, and/or questions about technology.

-Used subversion as a revision control system.

RPG Game

(4-person project)

(Javascript, Python, HTML, CSS)

-Utilized GitHub to properly document contributions.

-Used Python to create a builtin HTTP Server for localhost testing.

-Used Google Hangouts as a means to work together, Pair programming, and to have quick responses between the members.

Profile Website

(1-person project)

(Javascript, HTML, CSS)

-Utilized React for routing and DOM updates.

-Purchased the domain and hosting from GoDaddy.com

-Created and maintained to act as my personal profile and virtual resume.
